- New Moon
- ◐ First Quarter
- Full Moon
- ◑ Last Quarter

This calendar is designed to provide accurate
and valuable information for all who cultivate a garden.

Telephone the Bureau of Meteorology and find the average rainfall expected for each month in your area and write it in the box provided. Compare it with the actual rainfall from measurements for your district as they come to hand. By the year's end this will make very interesting reading. Remember, 25 mm equal one inch. If using your own gauge, don't put it near trees or buildings which can deflect rain.
